PROFILE

I build web scraping and workflow automation in Python, the kind of systems that quietly replace work someone used to do by hand every week. Scraping is usually the first ten percent of a job: the real work is making every stage fail safely and pick itself back up without someone watching it. I care about clear communication and getting the details right, and I'd rather ask one more question up front than deliver something that technically matches the brief and misses the point.

WORK EXPERIENCE

Automation & Web Scraping Developer (Python) - Self-employed March 2025 - present
Livorno, Italy

- For Ecowaste (waste management, Livorno): four-stage lead generation pipeline in n8n - weekly scan for new prospects, enrichment of missing contact data, Outlook inbox scanner for replies and bounces, sender that respects throttles and unsubscribes.
- For a manager at Mondo Convenienza (Pisa): replaced a monthly spreadsheet routine done by hand with a desktop application. Data goes in day by day; the Excel files it produces are identical to what the team already expected, so nothing downstream changed. Over 70% less time spent on the routine.

Bodywork Finishing Technician - Nuova Carrozzeria Accademia October 2024 - February 2025
Livorno, Italy

- Final finishing on repaired vehicles before they went back to the customer.
- Built the workshop's eBay sales automation (listing, pricing, product identification): over 50 items sold for around EUR 4,000 from parts that had been sitting unused.

Gate Security Officer - Studio Tecnico Navale Orsini S.r.l. September 2023 - June 2024
Livorno, Italy

- Access control at the company's vehicle yard: checked entry and exit paperwork and verified haulage authorisations for every trailer, so nothing moved in or out without matching documents.

SELECTED PROJECTS

- **Lead generation pipeline (Google Places API).** Searches an entire city for businesses, filters those with no website or a poor one, generates a complete demo site for each (layout, palette and fonts per business, colours pulled from their logo) and tracks found / contacted / answered in a spreadsheet.
- **Outreach automation in n8n.** Weekly scan, enrichment, Outlook inbox scanning for replies and bounces, throttled sending with unsubscribe handling.
- **Desktop reporting app (Python).** Replaces a manual monthly Excel routine; output files identical to the originals, no retraining needed.
- **Local retrieval system (RAG).** Search over large personal archives with embeddings computed locally; only the final request reaches the model, so the data never leaves the machine.
- **eBay inventory automation.** Large product inventories with dynamic pricing and AI-driven product identification.
- **Image geolocation tool.** Desktop tool in Python that extracts location information from images.

SKILLS

Python · Web Scraping · Web Crawling · Data Extraction · Data Scraping · Data Mining · Beautiful Soup · Scrapy · Automation · n8n · API Integration · Bot Development · Scripting · Artificial Intelligence · Microsoft Excel · CSV

EDUCATION

Diploma di perito industriale - Informatica e Telecomunicazioni (Computer Science / IT) 2016 - 2022
Istituto Tecnico Industriale Statale "Galileo Galilei", Livorno

CERTIFICATIONS

E-Commerce Manager September 2022
Talentika S.r.l., Rosignano Marittimo (LI)

CCNA - Cisco Networking Academy June 2022
Cisco Networking Academy (ITIS Galilei, Livorno)

LANGUAGES

Italian - native · English - fluent

OTHER EXPERIENCE

- Game and VR development with Unity: built and published games and interactive experiences on Roblox and in VR, from gameplay scripting to release and iterating on player feedback.
- Vinted seller with 100+ positive reviews, built on accurate descriptions, honest condition reporting and fast shipping.

WORKING STYLE

Accountable for outcomes - Detail oriented (Upwork working style assessment). Identity verified on Upwork. Available more than 30 hours/week.

I authorise the processing of my personal data pursuant to EU Regulation 2016/679 (GDPR) and Italian Legislative Decree 196/2003.
